## *Dock Leveller*

- > 22mm steel lip
- > 8mm checker top plate
- > Over voltage protection control
- > 20mm steel front guard
- > Lip design to be used with small trucks
- > Guards on front lip to protect piston from truck backing up
- > Variable machine lengths to best fit loading dock space limitations
- > Power key and box key
- > Three layer base point

## *Scissor Lifter*

- > Lip designed to be used with small trucks
- > Controlled descending speed
- > Hydraulic power unit is designed to insure long life with proper pressure relief and flow control system
- > Proper inlet filtration with huge intake to eliminate negative pressure build up on pump suction side
- > Submersible in oil hydraulic pump minimizing the chance of rusting in a humid areas and reducing heat generation, extending pump life

## *Heavy Duty Power Lifter*

- > Platform size
- > Maximum lifting capacity
- > Maximum height to be reached
- > Time required to reach the maximum height
- > Whether machine needs a pit or can sit exposed above the ground.

Please note when ordering this unit that the length of the platform is directly proportional to the length of the legs used. Therefore the longer the platform the better. A short platform that needs a high reach requires multiple scissors.
